### **DETAILED ACTION**

This is a non-final Office action. New grounds of rejection are presented which were not necessitated by the applicants' amendments to the claims.

#### ***Claim Objections***

Claim 10 is objected to because of the following informalities:

On line 3 of claim 10, "the derived" should be replaced with "a derived".

Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 10-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The method of claims 10-14 fails to qualify as a statutory process because the method is neither tied to a particular machine or apparatus or nor does it transform a particular article to a different state or thing. This rejection may be overcome by positively reciting a specific machine, device or apparatus in a significant step of the method.

***Response to Arguments***

Applicant's arguments, see pp. 4-9, with respect to the prior art rejections have been fully considered and are persuasive. The prior art rejections have been withdrawn.

***Allowable Subject Matter***

Claims 1, 2, 6, 15, 16, and 26 are allowed.

Claims 10-14 would be allowable if rewritten overcome the rejection under 35 U.S.C. 101.

The following is a statement of reasons for the indication of allowable subject matter:

Regarding claims 1, 2, 6, 15, 16, and 26, the primary reason for allowability is the inclusion of the detecting means detecting and comparing variations in the extracorporeal blood pressure during multiple tests to indicate blood flow restriction, in combination with all of the other limitations of the claims, which is not taught or suggested by the prior art of record.

Regarding claims 10-14, the primary reason for allowability is the inclusion of detecting restricted blood flow when elevation of the derived intravascular blood pressure over a series of calculations is indicated, in combination with all of the other limitations of the claims, which is not taught or suggested by the prior art of record.

***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PATRICIA C. MALLARI whose telephone number is (571)272-4729. The examiner can normally be reached on Monday-Friday 10:00 am-6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor, II can be reached on (571) 272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
